

# Plug-and-play your way to seamless integration with Aurea Messenger Enterprise

In the always-connected world of mobile, cloud, big data, and social networks, your customers are moving faster than ever. And they're doing so across a complex network of systems and applications that is constantly adapting to your business.

That's why it's more important than ever to be able to add new technologies without getting bogged-down in time-consuming custom implementations, or high-risk rollouts. Aurea Messenger Enterprise lets you plug-and-play the technologies you need, on-demand.

## Evolve your infrastructure on your terms

With Aurea Messenger Enterprise, your technology can finally keep pace with your business. The solution delivers an even more sophisticated messaging bus that facilitates swift and simple integration of mission critical systems through a series of Aurea-developed or custom adapters.

Aurea Messenger Enterprise is also now fully Docker-enabled, letting you break down silos in the software delivery process to enable continuous integration and continuous delivery (CI/CD).

With Enterprise Edition capabilities for real-time metrics streaming and collection – and all-new, model-based integration – it's even easier to evolve your infrastructure when, where and how you need it.

### AUREA MESSENGER ENTERPRISE DELIVERS:

**Micro-services architecture with Docker support:** Aurea Messenger supports Docker out-of-the box. With two Docker images – one for a domain manager and one for a host manager – Aurea Messenger provides the building blocks for simple and complex deployments.

**Improved speed and performance:** We know that time is money. That's why we've launched a suite of architectural improvements designed to maximize messaging speed. Our new REST cache drives a 6x increase in speed, while the new POJO cache clocks-in at 2.5 times faster than our standard version. Overall, these architecture changes mean that Aurea Messenger Enterprise performs better than any other messaging bus on the market.

**Cost-effective scale:** The new Aurea Messenger Enterprise doubles messaging capacity from our standard version. This allows you to maximize your existing hardware by doubling its messaging throughput, slashing expansion costs as your systems scale.

### THE COMBINED POWER OF AUREA INTEGRATION SOLUTIONS:

- World-class enterprise service bus messaging
- Building blocks for multi-channel business process automation
- Real-time system monitoring to find and fix systems issues
- Reduces design-build-deploy optimize time by 50%

**Real-time analytic insights:** Today's businesses run in real-time, so lagging insights offer diminished value. Aurea Messenger Enterprise delivers rapid new insights to diagnose and resolve complex flow control issues through real-time metrics streaming and collection. We've massively reduced transmission latency, and increased large-volume data collection speed by 4x, and data capacity by 10x.

**Out-of-the-box ease:** At the core of Aurea Messenger Enterprise is a flexible and comprehensive collection of pre-defined integration adaptors. These adapters let you take a plug-and-play approach to bring new systems and applications online. And, with Aurea Integration Solutions, you all have access to an all-new rapid integration modeling tool with Aurea Studio. Together, these out-of-the box capabilities deliver simple, fast design and deployment services to save you time and money.

## Great customer experience is more than the sum of its parts

Aurea Enterprise Editions deliver technology solutions that, when used together, allow you to unleash the best in customer experience. That's why Aurea Messenger Enterprise is part of Aurea Integration Solutions.

Aurea Integration Solutions includes our three major enterprise infrastructure solutions – Aurea Monitor, Aurea Messenger, and Aurea Process – and is the most sophisticated solution focused on workflow design, orchestration, execution, and monitoring. We've even wrapped them with a new design environment called Aurea Studio that allows you to design and build transformational customer experience applications.

### Aurea Integration Solutions | Aurea Studio

A visual modeling tool that allows you to graphically design, build, test and deploy new business processes, monitoring requirements and integrations across Aurea Integration Solutions. As processes and workflows change, Aurea Studio allows you to see the ripple effects across your processes and underlying systems.

- Saves development time and cost by instituting a common method for application development
- Creates a collaborative development environment to enable asset sharing across teams and geographies
- Integrates business object and integration modeling

#### Aurea Messenger

A sophisticated messaging bus that facilitates plug-and-play integration of mission-critical systems through a series of Aurea-developed adaptors.

- Enables seamless association of business process and data
- Delivers a suite of pre-defined integration adaptors
- Supports rapid integration modeling

#### Aurea Monitor

Enables auto-discovery of all systems across your infrastructure for business-process-focused instrumentation and monitoring.

- 85% reduction in time and cost associated with problem identification
- Real-time dashboards for visibility of business and operational performance
- Auto-monitoring of processes and systems

#### Aurea Process

A world-class business process management solution that enables you to model and measure truly multi-channel customer journeys, while reducing design-build-deploy time by half.

- Models and deploys complex, high-velocity processes for every channel
- Speeds mobility by leveraging the same application logic and process models across channels
- Drives continuous improvement through optimized customer interactions and supporting business processes and systems.
